We often hear that some computers are infected by virus. We must understand that whenever a computer is infected by a virus, there must exist an executable program which is hostile. If you accidentally run it, the program will be hilarious and have a good time in your computer. It may even destroy all of your files. This program is a virus. Once you run the program, your computer is infected by it. I encountered this kind of virus before. One by one, my files were damaged. The situation was so serious that my computer nearly could not function normally.
