## 1110502 大專院校畢業生 中翻英短文翻譯 題目

最為人所知的加密貨幣是比特幣(Bitcoin)。比特幣是一種數位代幣,受到稱為「區塊鏈」的先進技術保護。區塊鏈的安全機制可防範沒有密碼的人進行提取。唯有持正確密碼的合法所有人才能在交易中使用其比特幣。實體貨幣,不管是紙幣或硬幣,都出自鑄幣廠。相較之下,比特幣則是由強大的超級電腦創造出來,而這個過程稱為「挖礦」。

加密貨幣 cryptocurrency 代幣 token

區塊鏈 blockchain 機制 mechanism

合法的 rightful 交易 transaction

鑄幣廠 mint 挖礦 mining

## 1110502 大專院校畢業生 中翻英短文翻譯 參考答案

The best known cryptocurrency is Bitcoin. Bitcoins are digital tokens that are protected by advanced technology called "blockchain." The blockchain security mechanism prevents people who do not have a password from accessing them. Only the rightful owner who possesses the correct password can use his or her Bitcoins in transactions. Real money, whether paper or coins, comes from a mint. In contrast, Bitcoins are created by powerful supercomputers, and this process is known as "mining."
