We can't go to Mars, but now, we can send our names to the Red Planet. NASA's Perseverance Rover successfully landed on Mars with nearly 11 million names on Feb. 18, 2021. The journey took about seven months and traveled around 480 million kilometers. Those names, written on three tiny chips, are on the surface of Mars because that was a part of NASA's campaign—Send Your Name to Mars.

If you didn't catch the flight before, just hold on the chance this time. The next flight is set for July 2026. All you need to do is to sign up and submit your information on NASA's website. So, don't miss the chance again!
